AUTHOR: Shestopal, V.M.

TITLE: Air Flow Sand Drying

PERIODICAL: Liteynoye Proizvodstvo, 1959, Nr 5, pp 24-25 (USSR)

ABSTRACT: The author describes three different methods of drying sand by hot air. In Fig. (1) the method used by the factory ZPS at Gotwald (Czechoslovakia) is shown. The sand which has to be dried falls in front of a nozzle which releases hot air of 800°C, transporting the sand to the top. Capacity 1 ton per hour. In Fig. (2) and (3) a method is shown which is used by the Ford factory in London. Fig. (4) shows a method similar to the one used by the firm of Costner in Australia. There are 4 diagrams

Self-slugging coke. V. M. Shestopal. *Vestnik Inzhenera* 1938, 205-6; *Chem. Zh.* 1939, 11, 1057.

By preliminary treatment of the coal with lime and other materials serving as fluxing agents in the production of iron the addn. of a flux in the production of the iron can be omitted. Analysis of a coke so prepd. showed volatile constituents 0.77, ash 20.4, S 0.08 and C 78.03%. Analysis of the ash gave Si 21.0, Al 18.15, Fe oxides 2.07 and lime 40.0%. The temp. of the fused metal corresponded to that with the use of normal coke and reached 1450. The consumption of coke amounted to about 7% of the amt. of metal. The m. p. of the slag was much higher and the attack on the furnace lining was much less. Lime consumption was half as great as with the use of a flux. The iron took up much less C. M. G. Moore

"On the Problem of Calculating the Precision of Casting Molds," V. M. Shestopal, Cand Tech Sci, Gipros-tanok

"Litey Proizvod" No 4, pp 19-22

Discusses method of "dimensional chains" for designing casting molds. For each mold or its sep assembly, a group of dimensions is selected. These dimensions, being distributed in definite succession along closed contour, comprise "dimensional chain," themselves representing links of this chain. Value of closing link, which has to be detd, is equal to algebraic sum of all other links. Mold for gearbox of turret lathe illustrates application of method.

Title ; Typical iron foundries

Periodical ; Lit. proizv. 4, 12-14, July 1954

Abstract ; Standards set up by the 19-th congress of the Communist Party USSR for the planning and construction of modern foundries are discussed. The technical and economical features, to be taken into consideration in the planning of foundry plants, are listed. Plans and tables showing the basic characteristics of two typical foundry plants intended for large scale machine construction, pipe casting, etc., are included.

proizvoditel'nosti trudy v mashinostroenii) Gosudarstvennoye nauch-tekh.
izdat. mashinostroitel'. literatury, Moscow, 1957. 511 pp.
(Table of Contents authors below)

This collection presents a comparative tech. and economic analysis of
most effective methods and industrial processes for obtaining high labor productivity
in machine building. Output may be stepped up by further standardization of machine
tools, materials, and production methods; drawing on unused potentials.
Covers all stages of planning and production as performed in modern plants of
USSR, actual experience, and new methods are discussed.

PHASE I BOOK EXPLOITATION

SOV/1437

Spravochnik metallista v pyati tomakh, t. 4, (Metals Engineering Handbook in Five Volumes, Vol 4) Moscow, Mashgiz, 1958. 778 p. 50,000 copies printed.

Ed. (Title page): A.N. Malov, Candidate of Technical Sciences; Ed. (Inside book): V.I. Krylov, Engineer; Tech. Ed.: T.F. Sokolova; Editorial Board: N.S. Acherkan (Chairman and Chief Ed.), Doctor of Technical Sciences, Professor; V.S. Vladislavlev, Professor (Deceased); A.N. Malov, Candidate of Technical Sciences; S.N. Pozdnyakov; A. Ya. Rostovyykh; G.B. Stolbin; and S.A. Chernavskiy; Managing Ed. for Reference Literature: V.I. Krylov, Engineer.

PURPOSE: This handbook may be useful to technicians and engineers working in the field of machine design and production.

COVERAGE: This volume covers the following topics: casting, forging, pressing, stamping, welding, electric methods of machining, and metal cutting. Recently developed electrical methods of machining which are not yet used in production are described; viz., the so-called "electropulse" and "electrohydraulic" methods. No personalities are mentioned. There are 79 Soviet references.

TITLE: All-Union Conference of Foundry Workers (Vsesoyuznoye soveshchaniye liteyshchikov)

PERIODICAL: Mashinostroitel', 1958, Nr 5, p 48 (USSR)

ABSTRACT: At the end of 1957, an All-Union conference took place in Moscow on scientific research in casting. After the plenary session the meeting broke up into the following 5 sections: iron casting, steel casting, technology of the casting form, non-ferrous casting, and equipment. A total of 45 reports were given. Representatives of the satellites also participated. V.M. Shestopal, Candidate of Technical Sciences (Giprostanok) reported on "The Latest in Projects of Foundry Shops and Plants". I.P. Yegorenkov, Candidate of Technical Sciences reported on "The Latest in Projects of Casting Machines". N.G. Girshovich, Professor and Doctor of Technical Sciences (LPI imeni Kalinin) reported on the important research work being accomplished in determining the continuity of solidification of castings. A.F. Landa, Professor, Yu.A. Litvintsev, Engineer and Florin of the Moskovskiy institut khimicheskogo mashinostroyeniye (Moscow Institut of Chemical Machine Build-

ing) reported on increased corrosion resistance and heat resistance of high-test iron with ball-shaped graphite. A.Ye. Krivosheyev, Professor of the Dnepropetrovskiy metallurgicheskiy institut (Dnepropetrovsk Metallurgical Institute) reported on "The Crystallization of Chilled Iron". B.S. Mil'man, Candidate of Technical Sciences (TSNIITMASH) reported on "The Formation of Ball-Shaped Graphite and Prospects for Receiving High Test Iron". N.D. Titov, Candidate of Technical Sciences (Automobile Plant imeni Likhachev) reported on "Conveyor Mass Production at SII". G.I. Kletskin, Candidate of Technical Sciences (Stankolit) spoke on "Improvements of the Process of Melting Iron in Cupola Furnaces". N.V. Gel'perin, Candidate of Technical Sciences (NII TSKhM) reported on "Production of Crank Shafts for Tractor and Harvester Engines". I.N. Prolov, Engineer of the Barnaul'skiy kotel'nyy zavod (Barnaul Boiler Plant) reported on the centrifugal casting of important iron and steel parts. Ye.M. Baturin, Engineer, reported on "Risers in Exothermic Heat Treatment". N.Ya. Kogan, Engineer, (VPTI, GLAVNIIP at GOSPLAN USSR) reported on "A New Technology of Producing Large Castings in Mechanized

Problems in Stability and Automation (Cont.)

SOV/2497

COVERAGE: The authors analyze static stability of a complex power system, taking into account automatic control and load characteristics. They discuss transients in a compensated network during short-circuiting to ground and describe netloads of calculating transients in current transformers. They also consider basic features of calculating current transformers with magnetizing and discuss linear theory of magnetic amplifiers as well as new types of frequency relays and frequency measuring devices. No personalities are mentioned. References appear at the end of each article.

TABLE OF CONTENTS:

Foreword

3

Tsukernik, L.V. Characteristics of Lyapunov's Theory of Stability and Problems of Stability of Power Systems

5

The author presents a brief review of studies on the theory of stability of power systems and shows the importance of Lyapunov's work on the general theory of stability. There are 35 references, all Soviet (including 2 translations).

Tsukernik, L.V. Analysis of a Matrix of Equation Coefficients for a Disturbed Motion of a Complex Power System and Determination of the Order of a Characteristic Equation

Card 2/6

Problems in Stability and Automation (Cont.)

SOV/2497

Kachanova, H.A., and V.H. Shestopalov. Short-time Unloading of a Receiving Power System as a Means of Increasing Stability 77

The authors discuss short-time unloading of a receiving power system with automatic reclosing for increasing system stability. They briefly describe the construction and results of testing of a combined frequency relay which may serve as a starting mechanism for short-time unloading. There are 3 references: 2 Soviet and 1 English.

Sirota, I.M. Methods of Calculating Transients in Current Transformers 37

The author presents a general analysis of a transient process and discusses a new and sufficiently accurate method of calculating transients. The method takes into account nonlinearity of magnetic characteristics of current-transformer core and inductance of a secondary-circuit load for any initial conditions. The author uses a method of so-called specific quantities as an auxiliary method of procedure and calculates transients with the aid of magnetization curves for iron for successive intervals of 0.25-0.50 periods. There are 13 references: 9 Soviet, 3 English and 1 German

Kubyshin, B.Ye. Problems of a Linear Theory of Magnetic Amplifiers 113

The author shows that a magnetic amplifier should be considered as a current or voltage generator controlled with d-c, a-c or pulse currents or voltages with a frequency lower than that of the magnetizing current.

Card 4/6

Elements in Stability and Automation (1981)

SOV/2497

He discusses equivalent circuits of magnetic amplifiers and derives expressions for amplifier parameters. There are 7 references, all Soviet (including 1 translation).

Kostyuk, O.M. Current transformers with D-C Magnetization and Basic Aspects of Calculating Transformers Used in Circuits for Automatic Field Regulation of Synchronous Generators

135

The author discusses a graphic-analytical d-c magnetization used in circuits for automatic field regulation of synchronous machines. There are 8 references: 6 Soviet, 1 English and 1 German.

CIRCUITS, DEVICES AND EXAMPLES OF CALCULATIONS

153

Kachanova, N.A. and L.V., Tsukernik. Analysis of Static Stability of a Long-distance Transmission Line, Taking Into Account Complex Load Characteristics

153

The authors study the effect of voltage and frequency static characteristics of a complex load as well as the effect of dynamic characteristics of an equivalent induction motor on the stability of a long-distance power transmission line. They conclude that the dependence of load

Card 5/6

Problems in Stability and Automation 1000000

SCV/2497

conductance on voltage is the major factor affecting stability. There are 6 references, all Soviet.

Shestopalov, V.N. Device for Measuring Frequency

164

The author discusses an electronic device for frequency measurement by measuring the duration of a certain number of periods. The number of periods is counted by means of a trigger circuit similar to that used in computers. The duration is determined with the aid of a vacuum-tube generator stabilized by means of a tuning-fork electromechanical frequency transducer. Measurements obtained with the aid of the device are sufficiently accurate in the wide range of radio frequencies. There is 1 Soviet reference.

Kubyshin, B.Ye. Method of Calculating Magnetic Amplifiers on the Linear Theory.

174

The author considers methods of selecting operating conditions for amplifiers and determining coefficients required in calculations. He presents a numerical example of calculating a magnetic amplifier for contactless power commutation. There is 1 Soviet reference.

ORG: Institute of Thermophysics SO AN SSSR, Novosibirsk (Institut teplofiziki SO AN SSSR) 44.55

TITLE: Specific heat and vacancy formation in titanium at high temperatures 44.55 27

SOURCE: Fizika tverdogo tela, v. 7, no. 11, 1965, 3461-3463

TOPIC TAGS: titanium, heat capacity, crystal vacancy

ABSTRACT: A modulation method was used for determining the thermal capacity of titanium. A titanium iodide wire specimen was heated using ac current, and the specific heat was found from the formula $mc_p = \frac{P}{2\omega\theta}$ 21,44,55 1)

where P is the power and ω the frequency of the current fed to the specimen, m is the weight of the specimen and θ accounts for the amplitude of temperature oscillations. The color temperature of the specimen was determined using a photomultiplier with red and blue light filters. The vacancy concentration is given by the formula

$$C = 170e^{-\frac{1.8 \cdot 10^4}{T}}$$

Card 1/2

ACC NR: AP5027450

which attains a value of 1.7% at the melting point. Curves are given showing the thermal capacity of titanium as a function of temperature. Satisfactory agreement is found between experimental points for three specimens and the experimental curve

$$c_p = 0.120 + 2.2 \cdot 10^{-5} T + \frac{2.3 \cdot 10^9}{T^2} e^{-\frac{1.8 \cdot 10^4}{T}}$$

A comparison with previous data in the literature shows a considerable divergence in some cases. The author thanks P. G. Strelkov and Ya. A. Kraftmakher for interest in the work, G. G. Zaytseva for consultation, and D. S. Mirinskiy for assistance in preparing the specimens. Orig. art. has: 1 figure, 3 formulas.

TITLE: Heat capacity of graphite at temperatures in the 1750°-2850°K range ^{21,44,55}
_{21,44,55}

SOURCE: Zhurnal prikladnoy mekhaniki i tekhnicheskoy fiziki, no. 4, 1965, 170-171

TOPIC TAGS: heat capacity, graphite, emissivity

ABSTRACT: The heat capacity of graphite was measured. The study made use of modulation methods and optical pyrometry. Specimens of spectrally pure graphite heated by 50 cps ac current were measured in a vacuum in the 1750°-2200°K range and in an argon atmosphere in the higher (2000-2850°K) range. Heat capacity was calculated according to the formula

$$mc = P/2\omega\theta$$

where P = power; ω = current frequency; θ = amplitude of temperature oscillation. Measurements were based on changes (measured by two light

Card 1/2

2

filters) in the radiant emissivity of the specimens. Color temperature lamps were used to calibrate the photomultiplier tube used in emissivity measurement in the 1700-3000°K range; tungsten filaments were used in the 2100-2550°K range. Results of the measurement of heat capacity of graphite in the 1750-2850°K range shown for five specimens are graphed. Measurements were accurate to ±5%. Results are compared with those of other authors. The authors thank P. G. Stralkov for his interest in the work and N. G. Potapov for preparing the specimens. Orig. art. has: 1 graph, 5 formulas.

TEXT: In previously published work (Refs. 1 and 4)
parametric amplification using resonant circuits was considered.
In the present paper the authors consider the uses of voltage
divider and bridge type circuits for amplification. The voltage
divider circuit is shown in Fig.1. The high frequency source
voltage is U_{ω} which is in series with the p-n junction
capacitance C and the resistance R_1 . A detector with a load
 R_H is connected across R_1 . The capacitance C is varied at a
comparatively low frequency by the voltage U_{BX} . The junction is

Some Questions Concerning Parametric Amplification Using p-n Junction Capacitance

reverse biased by the voltage E_{CM} . The output voltage, amplitude modulated, appears across R_H . Power and current gain are possible but not voltage gain. This simple circuit is then analyzed to obtain expressions for voltage, current and power gain. The current and power gain in this circuit for quoted parameters are 40 and 10. An alternative, simpler form of the circuit is given in Fig.2; here the p-n junction (C) is fed from a high frequency current generator. A similar analysis is carried out in this case, an ideal detector also being assumed. Shunting of the junction by the detector is taken into consideration. In this circuit the maximum power gain is $1/4$ the ratio of the input resistance of the circuit to the load resistance, compared to $1/16$ of this ratio in the first circuit. In Fig.4 the bridge circuit amplifier with a p-n junction capacitance is shown, in which the high frequency is applied through the small capacitance C. The reverse biases are applied to the four p-n junctions C through the potentiometer R_1 . The signal to be amplified is

TITLE: A Kipp Relay Using Junction Transistors With
Electronic Control of the Pulse Length

PERIODICAL: Moscow. Aviatsionnyy institut. Trudy, No.128, Moscow,
1960. Primeneniye poluprovodnikovyykh priborov v
aviatsionnykh radiotekhnicheskikh ustroystvakh;
sbornik statey. pp. 84-90

TEXT: It is sometimes convenient to control pulse lengths
electronically, that is, by voltage control. This can be
achieved by means of a Kipp relay circuit with pulse length
control, using transistors which the author describes and
analyzes in simple terms and which is shown in Fig.1 ($-24B = 24V$;
 $Bb1x0d = output$). The pulse length is controlled by means of the
voltage E_1 . An expression for the pulse length τ is derived.
In the practical circuit a variation of E_1 from -17.8 to -29
volts altered the pulse length from 8 to $1400 \mu sec$. Over this
range the output pulse amplitudes of $18 V$ do not vary by more than
 10% . The pulse rise and fall times are about $4 \mu sec$.

Capacitance of a varicap and the distribution of ionized impurities in its p-n junction
Izvestiya vysshikh uchebnykh zavedeniy, Radiotekhnika, v. 5, no. 6, 1962, 688 - 698
TEXT: A semiconductor junction, in which the concentration of ionized impurities varies along the axis perpendicular to the plane of the junction, is considered. The structure of the space charge in the region of the p-n junction is illustrated in Fig. 1, where the coordinates x_1 and x_2 correspond to the boundaries of the depletion layer. The differential capacitance of the junction is expressed by a formula similar to that of a parallel plate capacitor, i.e.

$$C = \frac{\epsilon S}{4\pi (x_2 - x_1)}$$

where ϵ is the permittivity of the semiconductor material and S is the area of the p-n junction. The problem consists of
(1),
Card 1/4

Capacitance of a varicap

S/142/62/005/006/004/011
E192/E382

$$C = C_0 \left(\frac{\varphi_K}{U + \varphi_K} \right)^n \quad (13) ,$$

where C_0 is the initial capacitance and φ_K is the contact potential. For this $C(U)$ Eq. (9) is used to evaluate $\varrho(x_1)$ when $\varrho(x_2) = \varrho x_2^m$ and $\varphi(x_2) = \varphi$. Eq. (9) can be used for approximate calculation of the acceptor (or donor) distribution for a given distribution of donors (or acceptors) and a given experimental graph showing the functional dependence of the capacitance on the applied voltage U . There are 6 figures.
